

This is a little tool to make it easy to get MPEG- information from MPEG 1/2/3 video and audio files. MPEG Info is built upon binaries from [mpgtx](#). [mpgtx](#) is a command line MPEG audio/video/system file toolbox. [mpgtx](#) is as MPEG Info released under the GPL license.

Just drop the MPEG file into MPEG Info X. Read, print or save the output. The only problem right now seems to be a bug in "Estimated Duration" for MPEG2 files.

Version history

16/07/2002 : Version 0.2 is out. In this version drag-and-drop is implemented. Usefull helpfile was added and this version is localized in german language now. Also Print and SaveAs functionality was added.

12/01/2001 : Beta version 0.1b is out. Its not much but it is a start. Until next version drag-and-drop will be implemented.
